Django Task Three

1. **Project Setup:**

   - Create a new Django project and an app within it.

   - Configure the app's models to include multiple related fields, such as ForeignKey or ManyToManyField.

2. **Admin Panel Configuration:**

   - Register the created models in the Django admin panel to manage them easily.

   - Customize the admin panel by creating ModelAdmin classes to control how the models are displayed and managed.

3. **Superuser Creation:**

   - Generate a superuser account to access the admin panel with elevated privileges.

4. **Data Retrieval in Views:**

   - Implement views that retrieve data from the database, considering optimized queries using select_related or prefetch_related when dealing with related models.

5. **URL Routing and Views:**

   - Define URL patterns and corresponding views within the app's **urls.py** file.

   - Implement functional based views as required for different functionalities within the app.
